MODULE GUIDE

What each module does.

MODULE	HIGHLIGHTS
Dashboard	What needs attention now (live), how the day is going, and how the hospital is doing, by role.
Patients	Registry, allergies, restricted records, gap-free patient numbers per organisation, search and recents.
Appointments	Booking, check-in and queue; the database guarantees no double-booking.
Encounter	SOAP notes with append-only revisions, vitals, signing, reasoned amendments, prescriptions with an honest safety report.
Emergency	Tracking board, triage with decision support (a trained classifier plus safety rules), treatment and admission.
Beds and admissions	Wards, bed maps, admit, transfer and discharge.
Laboratory	Specimens, results against ranges, separate verification, critical alerts and acknowledgement, result history.
Imaging	Orders, DICOM header registration with a wrong-patient guard, radiologist reports, external viewer link.
Pharmacy	Expiry-first stock ledger, purchasing, dispensing and returns.
Billing and insurance	Exact money, tax rules as data, idempotent payments, refunds, pre-authorisation and claims.
Insights	Eleven fixed metrics with charts and a table view; no generated SQL.
Audit and setup	Audit viewer with chain verification and break-glass review; facilities, wards, formulary, tax and payers with a first-run checklist.
Portal	A patient's own appointments, medicines, released results and visit summaries; video visits.

Not built yet: automated backups, critical-result paging, e-prescription, a payment gateway, patient self-booking, languages other than English, a native mobile app (see the roadmap).
