INTEGRATIONS

# What connects, and what has actually been run.

| SYSTEM | ROLE | STATUS |
|---|---|---|
| **Keycloak (Haven packaging)** | Sign-in (OIDC code + PKCE), roles in the ID token | Run live on k3s: sign-in, session check and sign-out tested in Chrome |
| **Envoy Gateway** | TLS edge, session check, rate limits | Run live on k3s with a self-signed demo certificate; no real CA certificate yet |
| **CloudNativePG** | PostgreSQL on Kubernetes | Run live on k3s (PostgreSQL 17) |
| **FluxVM** | Deployment runtime and VM inventory | Run live: the stack ran in a FluxVM VM; inventory adapter run against a real instance. Token authentication not verified |
| **Nuvora** | Hospital-private AI model backend (OpenAI-compatible) | Adapter tested against a fake and a local model server; not run against Nuvora itself |
| **Netra** | Network observability (read-only metadata) | Tested against a stand-in; not run against Netra |
| **FHIR R4** | Read-only API for Patient, Encounter, Observation, AllergyIntolerance, MedicationRequest, Appointment, `$everything` | Covered by automated tests; no external consumer verified |
| **DICOM viewer** | External viewer link from imaging | Link only; header registration tested, no PACS integrated |

Only metadata, such as counts and health, ever flows toward infrastructure products; nothing patient-related does. The AI provider receives clinical text only after identifier removal. Gryvia, Fabric, Atlas and other Zyvor products are not integrated.
